

C<sup>2</sup>  
15. The package assembly of claim 1, wherein all regions of the bottom side of the sealing member face and overlie a wall of the reservoir.

16. The package assembly of claim 1, wherein bonding strength between the sealing member top side and the packaging material is greater than bonding strength between the bonding region of the sealing member bottom side and the reservoir.

Please add the following new claims.

ADD  
C<sup>3</sup>  
17. The package assembly of claim 1, wherein a major portion of the top side of the sealing member is bonded to the packaging material.

18. The package assembly of claim 1, wherein the packaging material includes an end with a seam oriented substantially parallel to the bonding region of the bottom side of the sealing member.

19. The package assembly of claim 18, wherein the packaging material includes a second end with a second seam oriented substantially parallel to the bonding region of the bottom side of the sealing member.

20. The package assembly of claim 19, wherein the bonded region of the sealing member top side is bonded to a region of packaging material separate from the first and second seams.

21. The package assembly of claim 1, wherein the sealing member includes a layer of aluminum foil.
